These Earphones Fit!

Welcome the JH-M Custom Motorcycle Earphones by Hearing Dynamics

Beth Orless, President of Hearing Dynamics wasn't kidding when she said she had a new product that would make the most cynical sceptic a believer. Beth approached me during AZ Bike Week & told me she had joined forces with the original designer & engineer of in-ear music products, Jerry Harvey to create the most brilliant sounding custom in-earphones for motorcycle enthusiasts: The JH-M Line.

I couldn't wait to prove her wrong. We met at Buddy Stubbs in Phoenix where she put silicone in my ears to make castings for my new custom earphones. I was totally impressed during those 4 minutes I had the silicone in my ears because the decrease in noise was wonderful. It was great because I could still hear the band playing & people talking in the background but the noise level was definitely more comfortable. I was excited & wanted to know if this was to be expected with my custom JH-M earphones. Beth informed me my earphones would cut out over 25 decibels of noise & I would still be able to hear environmental sounds even with my music playing. I wanted to know how this was possible. Beth stated, "If you're blasting your car stereo you will not hear sirens or other cars around you. Meaning, you have to be smart: Play your music at a comfortable level so you don't damage your hearing & at a low enough level so you can hear noises around you." This made sense but I needed to prove this for myself.

My custom earphones arrived in the mail a few weeks later & I couldn't wait to try them out. The fit was extremely comfortable & the sound quality was exceptional. However, the real test was still to come so I hopped on my bike & took my earphones for a spin. I was able to hear the roar of my engine & road noise as well as every single note in the song. My tunes never sounded this good. I turned my head left then right & the earphones stayed put. I know with my regular earbuds they would have fallen out & I would've had the volume at top end & I still couldn't hear my tunes over the wind & pipes. These earphones were everything Beth promised & more. She turned this sceptic into a believer.

COMING!
